RiskSense® PLATFORM
INTELLIGENT SECURITY AND VULNERABILITY MANAGEMENT

Prevent Security Breaches

Cybercrimes are increasing every day and the cost to businesses is staggering. With each cyber incident, businesses lose productivity, revenue and reputation and face possible litigation. Cyber criminals have no boundaries, attacking businesses large and small, across all industries from retail to banks to healthcare organizations. The financial and personal data of millions of individuals and IT groups are scrambling to keep up with each new security update. Many IT groups are understaffed, overworked and unable to focus resources on preventing security incidents.

Proactive Platform Protecting Your Business

The RiskSense Platform, our Software as a Service (SaaS) offering, provides you with a management platform that leverages your existing vulnerability scanning software and assesses your security preparedness. It provides you with the intelligence data required to make risk based decisions and identify the actual risk of vulnerabilities and threats to your organization.

Offered through our partner RiskSense Inc., a leader in cyber security solutions and cyber research, the RiskSense Platform is a powerful tool. It combines vulnerability information with actionable threat intelligence mined from the Internet and integrates the information into a centralized location to deliver valuable reports for your executives and system administrators to use in prioritizing, reviewing and mitigating vulnerabilities.

BUSINESS BENEFITS

+ **Comprehensive Management** – Consolidates planning, remediation, resource allocation, threat exploits, compliance documentation, tracking, cyber-maturity and reporting in one place.

+ **Focused Cyber Security Approach** – Prioritizes vulnerabilities mapped to threat intelligence instead of by crisis.

+ **One-Touch Executive Presentation** – Provides real-time progress reports of remediation activities against identified vulnerabilities and validates IT budget and resources expenditures.

+ **Proactive Protection** – Available at ~4% of the cost of a breach and provides preventative security measures.

+ **Centralized Expertise** – Breaks down traditional IT silos and facilitates security sharing across teams by centralizing remediation resources and mitigation validation.

+ **Security Knowledge Base** – Ensures smooth transitions of key personnel by documenting security processes and historical vulnerabilities and threat intelligence.

Powerful Pre-Incident Security Tool

The RiskSense Platform is a scalable solution for distributed, complex enterprise networks and can be applied to your organization's entire IT infrastructure to reduce the time involved in the vulnerability management lifecycle (from detection to remediation) from weeks to hours to minutes. Visualize your organization's threat landscape with dashboards providing targeted and prioritized information to help security decision-makers and managers fix the most critical risks before they are exploited. RiskSense features include:

- **Threat Intelligence and Prioritization** – Manage your security resources and budget effectively with threat data that maps to key risk indicators.

- **Dynamic Visual Analytics** – Identify security threats quickly and easily with interactive visual dashboards showing critical risk patterns that are typically hidden.

- **Differential Analysis and Trending Intelligence** – Solve security weaknesses in your IT environment using actionable vulnerability trend data allowing you to make informed, strategic security decisions.

- **Remediation Tracking** – Delegate, manage, record and track progress of remediation assignments.

- **Collaboration** – Share a single security tool, with multiple user views, with your entire organization from IT manager, executives, technical engineers to auditors.

- **Unified Compliance Framework (UCF) Integration** – Assess and track your organization's compliance to over 400 standards to prepare and pass a 3rd party audit.

- **Vulnerability Lifecycle Management** – Track vulnerabilities in a usable process from identification to resolution.

- **Filtering Architecture for threat and vulnerability information** – Customize data sets with flexible filtering architecture to focus on specific data that's important to you.

- **Network and Application Vulnerability Integration** – Correlate network and application vulnerabilities for a single, unified view of your organization's security situation.

Contact Electric Lightwave and find out how you can use the RiskSense SaaS to assess your organization's security preparedness.

ABOUT ELECTRIC LIGHTWAVE™

Electric Lightwave™, an Integra company, serves as a trusted network infrastructure partner to enterprises, government agencies and carriers in select markets throughout the western United States. We combine dense metro and intercity fiber assets, enterprise-grade network solutions, including Ethernet, Wavelengths and IP, with a highly responsive and easy to do business with approach. Electric Lightwave offers a premium service experience to match our premium network infrastructure solutions.

ABOUT RiskSense® Inc.

RiskSense is an innovative provider of scalable computational intelligent security solutions that protect organizations from advanced threats, lateral insider attacks, rapid malware variants, persistent malware, and assists with delivering a resilient security posture.
