WHAT WAN WHEN?

With so many options to choose from, selecting the right service for your Wide Area Network (WAN) can be daunting.

Electric Lightwave makes it easy, with four simple questions designed to get you connected to the right solution for your WAN.

START

CUSTOMER MANAGED

Would you prefer to control the design, equipment and protocols of your infrastructure?

No, we'd prefer to work with a partner we can trust to keep our network – and business – up and running.

-OR-

Yes, all we need is the reliable fiber pipe and we'll take care of the rest.

DARK FIBER

Choose **Dark Fiber** for the ultimate in control, capacity and scalability when you build your own network over leased optical fibers.

Choose a service that offers network maintenance and/or management, and relax knowing you're in good hands.

Do you need the privacy and capacity of a dedicated physical network?

No, I'm more concerned with finding an affordable solution that gives us the flexibility we need to easily support many offices and applications with varied requirements.

-OR-

Yes, security and uninterrupted, low-latency, transparent connectivity are critical to our business needs.

WAVELENGTH SERVICES

Choose **Wavelength Services** and satiate your appetite for big bandwidth that belongs to you and only you. Connect locations with high-performance service supporting multiple protocols and data types.

PRIVATE LINES

Choose **Private Lines** for a dedicated point-to-point connection that's all yours. Benefit from a simple solution with complete privacy and affordable, scalable bandwidth.

Choose a service that offers private and secure data networking with provider visibility into traffic flow. Get flexible bandwidth, access options and scalability with managed services.

Is your organization centralized, with headquarters as the hub?

No, we have more dynamic networking needs, which require us to connect our locations quickly and seamlessly.

-OR-

Yes, headquarters sits at the center of our network, managing communications.

E-LINE

Choose **E-Line Ethernet Services** for centralized, hub-like connectivity between HQ and remote offices. Customize bandwidth by connection, scale as needed, and count on reliable, transparent service with a range of access types.

Choose a data networking solution that allows for multi-point to multi-point connectivity between offices with a high-degree of flexibility.

Do you have the skills and expertise in house to manage your own routing?

No, we'd prefer to leverage the skills of a networking partner to ensure uninterrupted connectivity with minimum resource requirements.

-OR-

Yes, we have a full, competent IT team, ready and able to handle Layer 2 switching between locations.

E-LAN

Choose **E-LAN Ethernet Services** and enjoy unlimited control over traffic management and prioritization. Get cost-effective, scalable mesh connectivity, with reliable QoS.

ELECTRIC LIGHTWAVE MANAGED

IP/MPLS VPN

Choose **IP/MPLS VPN** for a managed offering that converges multiple services onto a single, secure connection between many offices, enabling prioritization of voice, video and data for efficient Layer 3 routing.

Connect to the right WAN with Electric Lightwave
